

MUZAMMIL KHAN

Software Developer | React | Python | SQL | LLM | Generative AI | AWS
amzikhan711@gmail.com | +91 8234971938 | Indore, India

Software Developer with 3+ years of experience building scalable, production-grade AI-powered web applications and enterprise software using React.js, Next.js, Node.js, Python, FastAPI, PostgreSQL, TypeScript and AWS. Experienced in designing and developing high-performance CRM, ERP, Booking and Scheduling applications with expertise in Asynchronous Programming, RESTful APIs, Microservices, Docker, CI/CD Pipelines, Cloud Infrastructure, Secure API Development and Scalable System Design. Hands-on experience building and deploying LLM powered applications using the OpenAI API, LangChain, LlamaIndex, Retrieval-Augmented Generation (RAG), Prompt Engineering, Natural language-to-SQL (NL2SQL) and Vector Databases like pgvector. Proven ability to optimize backend performance, integrate third-party APIs, build secure and maintainable systems, and translate complex AI and business requirements into production-ready solutions within Agile/Scrum environments.

TECHNICAL SKILLS

Programming Languages: JavaScript (ES6+), Typescript, Python, SQL

Frontend Technologies: HTML5, CSS3, React.js, Next.js, Redux, Tailwind CSS, Material UI, React Query

Backend Technologies: FastAPI, Node.js, Express.js, RESTful API, Async API Design

Databases: PostgreSQL, pgvector, Redis, MongoDB

Generative AI: LLM Integration, Langchain, LlamaIndex, Prompt Engineering, Retrieval-Augmented Generation (RAG), OpenAI API, Vector Databases, MCP

Cloud & DevOps: AWS (EC2, S3, RDS, Lambda), CI/CD Pipelines, Linux, Docker, Vercel

Methodologies & Tools: GitHub, Agile, Scrum, Object-Oriented Programming (OOP), Postman, Unit Testing, Code Reviews, Jest, React Testing Library, Figma

PROFESSIONAL EXPERIENCE

Software Developer | Alit Technologies, Indore (*January 2025 - May 2026*)

- Built Full-stack ERP, Booking and scheduling software using TypeScript, React.js, Next.js, Redux, Node.js and Express.js. Designed Tailwind/MUI interfaces and high-performance PostgreSQL/MongoDB architectures (schema design, stored procedures, data modeling) that supported 100+ active user bookings and processed 1000+ daily transactions.
- Developed an enterprise-grade AI workspace using Python, FastAPI, React.js, TypeScript, PostgreSQL, pgvector and Redis. Implemented LLM integration using LangChain, LlamaIndex and OpenAI API, with Model Context Protocol (MCP) for standardized tool and context integration. Built Retrieval-Augmented Generation (RAG) with semantic search, vector embeddings, chunking and hybrid retrieval, alongside function/tool calling, streaming responses, conversation memory and prompt engineering. Enforced role-based access control (RBAC) and delivered secure enterprise integrations with GitHub, Gmail, Google Drive, Slack, Jira and Confluence to enable intelligent knowledge retrieval and workflow automation across business systems.
- Engineered a real-time POS terminal for an ERP software with zero-error financial logic, keyboard shortcuts and streamlined billing workflows, reducing average billing time from 45 to 30 seconds while processing 500+ daily in-store transactions across high-volume retail locations.

Software Developer | Creysto, Indore (*June 2023 - December 2024*)

- Developed responsive UIs and core business logic using JavaScript, React.js, Redux and Tailwind CSS; Improved performance through Lazy Loading, Code Splitting, Memoization, Throttling, Debouncing, React Hooks and Custom Hooks — achieving an 85+ Lighthouse performance score through Front-end optimization best practices.
- Built, tested and maintained 700+ RESTful APIs using Python and FastAPI; Designed PostgreSQL database schemas, Optimized queries to cut API response times by 20% and managed database migrations — Deploying and scaling services on AWS for production use.
- Designed an AI-driven lead-conversion prediction engine using Python, FastAPI, LangChain, OpenAI API and PostgreSQL processing 1,000+ leads daily — analyzing communication history, interactions, and dispositions to generate conversion-probability scores at approx 75% accuracy and powering AI next-best-action recommendations that improved lead prioritization and lifted team conversion rates.
- Engineered a natural-language-to-SQL reporting system using Python, Flask, LangChain and OpenAI API enabling non-technical users to generate analytics reports via plain-English queries, eliminating developer-written SQL for 80% of requests; added schema-aware AI SQL generation with validation and secure execution, cutting report generation time to a fraction of a second — deployed across 3 business units and adopted by 100+ users within the first month of launch.

KEY PROJECTS

Creysto CRM (*Python, FastAPI, React.js, OpenAI API, Langchain, PostgreSQL, Natural-language-to-SQL (NL2SQL), Docker, Microservices, Redis, AWS*)

- Developed and maintained Full-stack CRM platform using React, Python, FastAPI, PostgreSQL, Docker, Microservices and AWS. Designing scalable RESTful APIs, business workflows, and cloud-native backend services for enterprise applications.
- Contributed to the design, development, and deployment of 6+ customized enterprise CRM solutions, including Sales CRM, Collection CRM, Background Verification CRM, and HR Management CRM, delivering scalable business workflows, process automation, and domain-specific solutions across multiple industries.

West Feeds ERP (*React.js, Node.js, Express.js, Redux, Tailwind CSS, Material UI, PostgreSQL, MongoDB*)

- Architected and developed a Full-stack ERP platform from scratch using React.js, Node.js, Express.js, Redux, Tailwind CSS, Material UI, PostgreSQL and MongoDB. Designed scalable database schemas, stored procedures, high-performance RESTful APIs and enterprise resource management workflows while implementing complex financial calculations and billing logic with rigorous testing, achieving 100% calculation accuracy and zero billing errors in production.

WorkspHERE AI (*Python, FastAPI, React.js, OpenAI API, Langchain, LlamaIndex, PostgreSQL, RAG, MCP, pgvector, Prompt Engineering, Docker, Redis, AWS*)

- Engineered an enterprise-grade AI workspace using Python, FastAPI, React, PostgreSQL and Redis. Built high-throughput RAG pipelines with OpenAI, LangChain, LlamaIndex and pgvector, integrating the Model Context Protocol (MCP) alongside hybrid retrieval, vector embeddings, chunking, semantic search and streaming responses to deliver low-latency, context-aware AI experiences.

EDUCATION

Bachelor's of Technology | Astral Institute of Research & Technology, Indore (July 2019 - July 2022)

CGPA: 7.8/10
